refoam
the future
bedding, furniture, aviation & automotive

fully
circular
foam

Almost 50% of global plastic waste is foam.

Every year, millions of m³ of mattress and seating foam are incinerated or sent to landfill, generating unsustainable levels of pollution and raw material waste. Foamplant is launching the **sustainable foam alternative** the industry urgently needs: moorefoam[®].

moorefoam[®] is the world's first **fully circular open cell foam**, enabling bedding, furniture, automotive and avionics manufacturers to make their products sustainable.

Through reusing moorefoam[®], manufacturers can achieve **90% CO₂ reduction**. Vastly reducing their operations' carbon footprint, and achieving their **sustainability goals**.

Made from bio-polyester, moorefoam[®] is **naturally fire retardant** (no harmful additives required, key for mattresses and aviation seating).

The world needs
moorefoam[®]

moorefoam[®]
enables *your*
circular
production.

From old foam to new foam.
Without wasting any of it. Circular
production instead of linear.
Closed loop.

Fully circular - zero waste

Foam-to-foam recyclable.
No downcycling.

Made from bio-polyester

Open cell foam. No isocyanates
or organotin components.
Available in sheets and flakes,
varying in length, height and
width.

FR without additives

CRIB 5 certified.

Low CO₂ Footprint

Up to 90% reduction of CO₂ vs
conventional PU foams.

Long life span

Height loss: < 5%.
ISO 1856 test pending.

Safe & Clean

Oekotex[®] pending.

Refund

Take back and refund.
